V. Environmental Health Update

Mr. Tusick stated that the components that are to be used for drip systems under the new rules have not been approved by the State as of yet. Any companies who were approved by the State last year must resubmit their information to get approved for this year. At this point, no companies have submitted their information for approval. Once components are approved, they are posted on the State website.

VI. Personal Health Services Update

Mrs. Scherer stated that flu is reported as sporadic in Ohio. The type of flu reported is the type covered by the vaccine given this year. Flu shots are still being given at Friday morning clinics. Some counties are going to the schools and giving the vaccine to school age children.

The Public Health Infrastructure grant received an increase of $7,194.00. These funds must be used for Pandemic Flu planning.

The regional Health Districts (Geauga, Lake, Cuyahoga and Ashtabula) and Geauga Hospital will be taking part in a Pandemic Flu exercise on February 2, 2007.

The Nuclear Regulatory Committee (NRC) is working with ODH about possibly replacing the KI pills that will be expiring in May of this year. These pills were distributed in 2003 to the residents that live within the 10 mile radius of the Perry Nuclear Power Plant. A decision is expected to be made by June or July.

The participants will keep a log of their physical activities and diet.

VII. Variances

A. Blanket Variance for Depth to a Seasonal Water Table

Mr. Tusick explained that under the new rules, section 3701-29-13(A) requires a minimum of 2’ to any limiting condition. This includes soils with a high seasonal water table. Many lots that were previously approved by the department, existing properties, and newly
proposed lot splits or subdivisions have soils with less than 12" to a seasonal water table. Section 3701-29-13(D)(1) allows the Board of Health to grant a variance to paragraphs A & B of this rule in accordance with13(D)(1) and rule 3701-29-18.

Mr. Tusick stated that the Environmental Health staff recommends granting a blanket variance for lots with seasonal water tables at less than 12" but greater than 8". This would affect only new on-site systems being installed under the new code. The current variance fee would need to be submitted to the Health District, but it would be issued as an in-house variance.

Mr. Benenati moved to approve a blanket variance for lots with a seasonal water table at less than 12" but greater than 8" for new on-site systems in accordance with 3701-29-13(D)(1). Once a message was able to be left, it took 8 days to get a return call.

Some of the doctor’s offices have not heard about the system and they must also use it. Dr. Bowers confirmed that he had no information about this system either.
